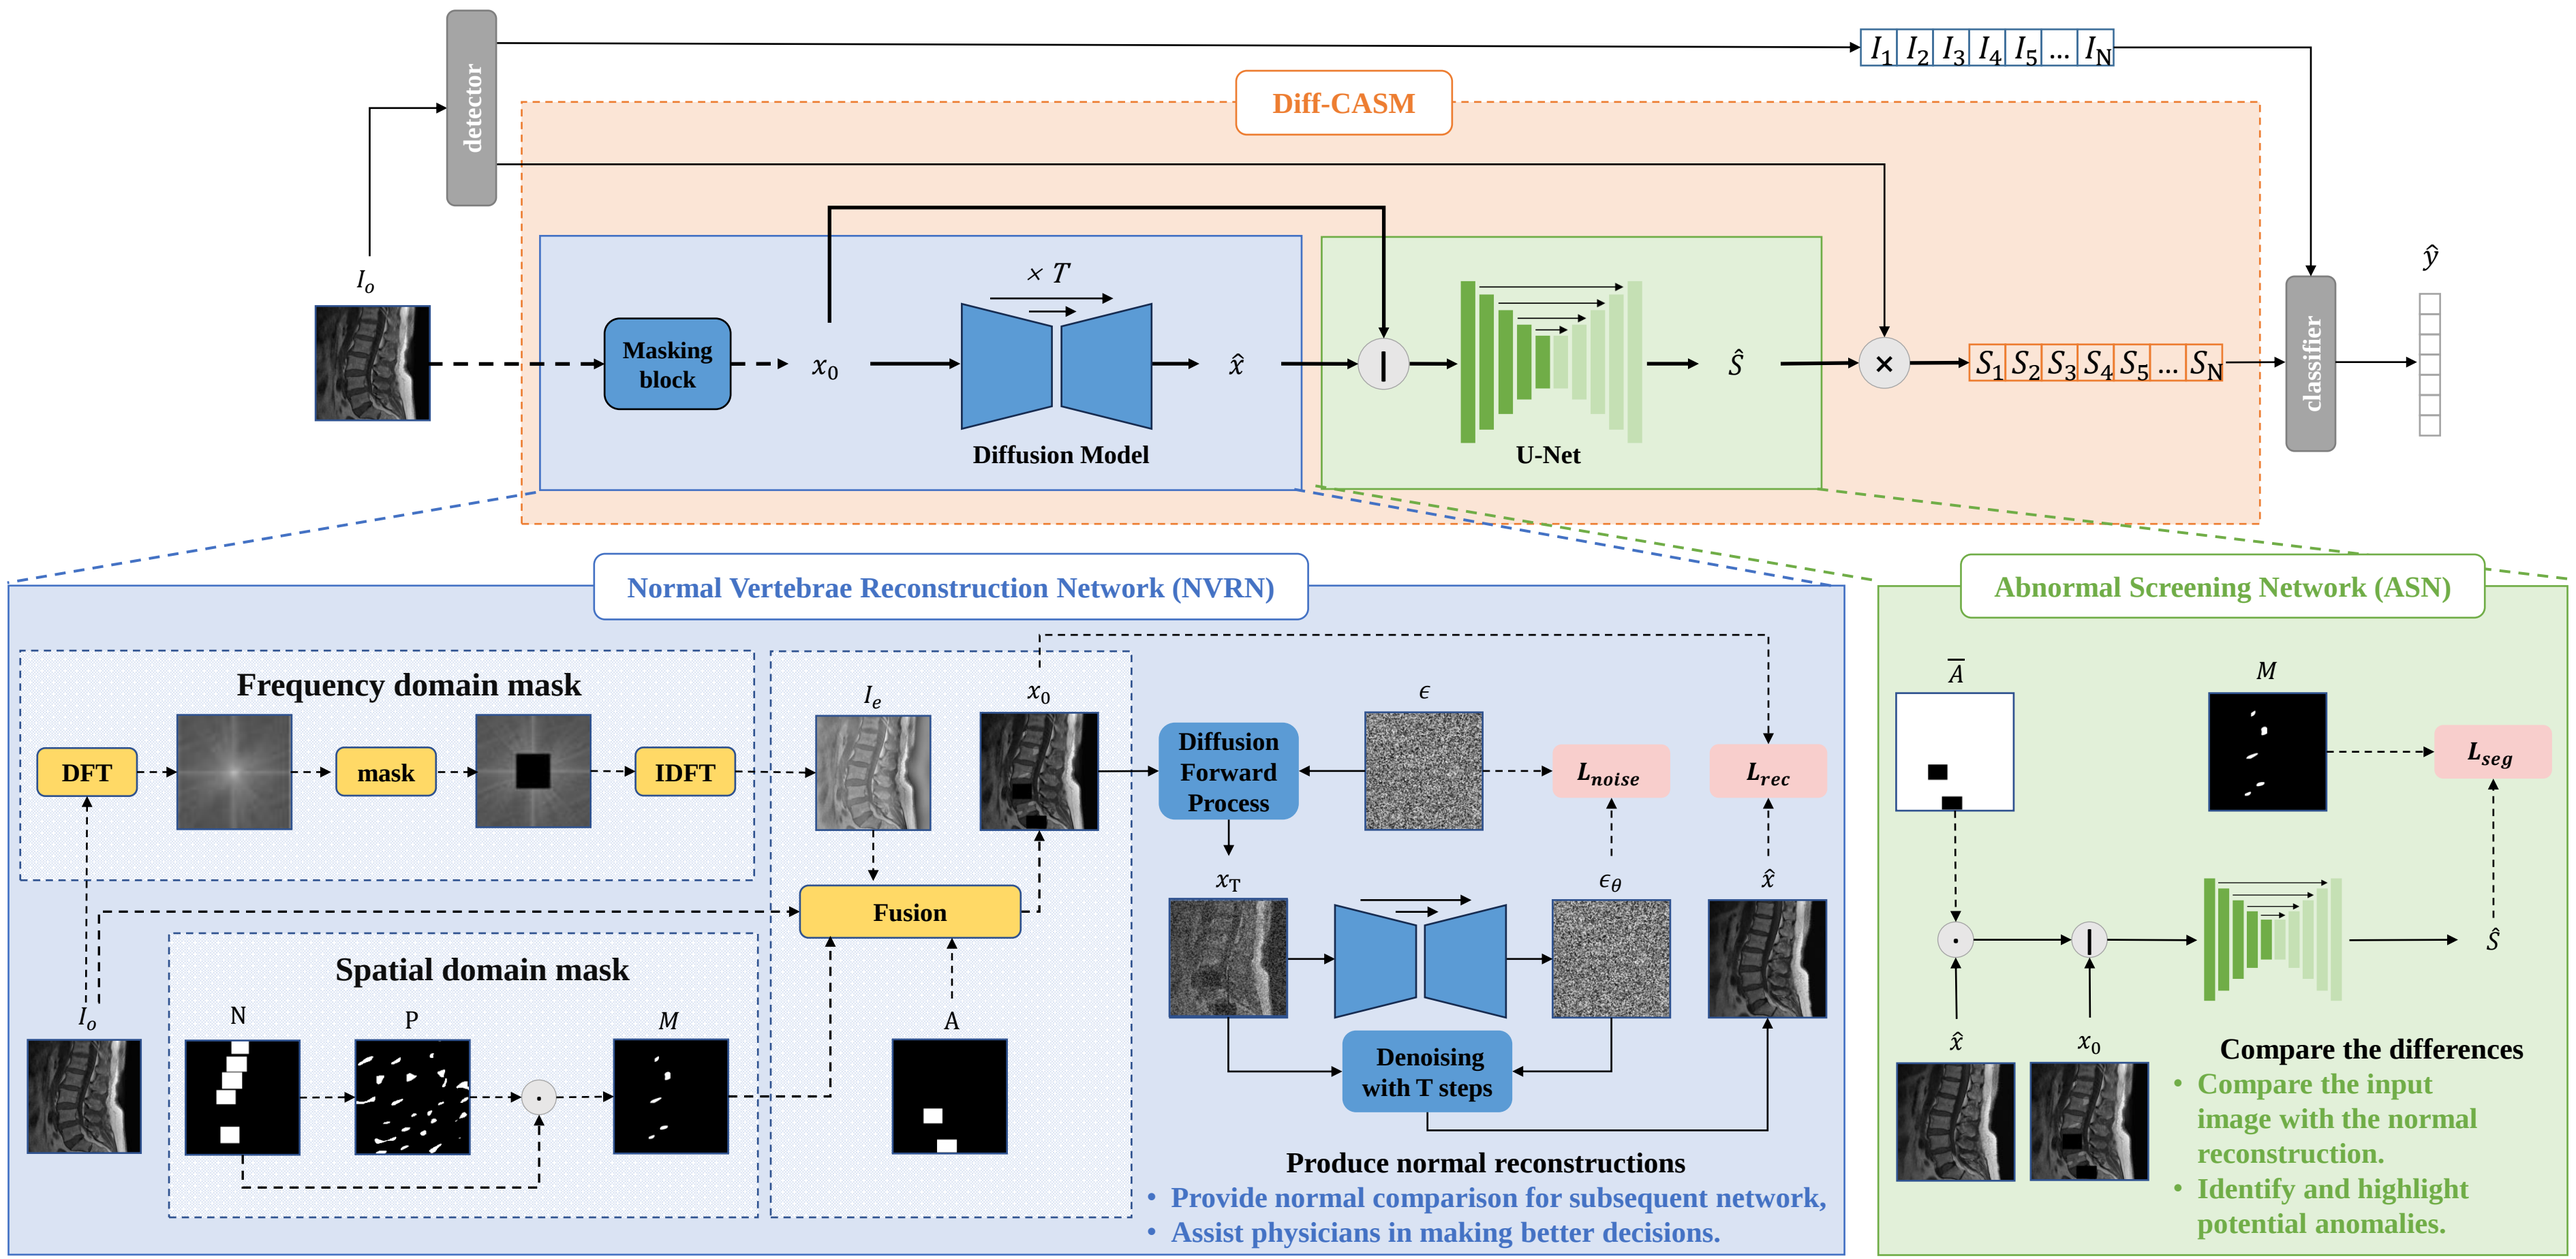
Proposed Workflow of Diff-CASM for Diagnosing Vertebral Diseases



I_o : original input image

x_0: preprocessed Input

T : diffusion steps

$\hat{x}$: normal reconstruction

$\hat{S}$: output saliency map

$\hat{y}$: output predicted labels

$\cdot$: Hadamard product

$|$: channel concatenation

$\times$: ROIs crop

$\overline{A}$: mask without abnormal vertebrae

$\longrightarrow$: Training & Inference

$\dashrightarrow$: Only Inference
